

Assignment 6

Part-1

1. Packet number: 3

The type of application-layer protocol message being carried is: **DNS**

The number of fields in the UDP header is **4** and they are:

- Source Port
- Destination Port
- Length
- Checksum

No.	Time	Source	Destination	Protocol	Length	Info
3	2.271830	10.200.180.137	10.250.200.3	DNS	71	Standard query 0x804a A www.nyu.edu
4	2.288604	10.250.200.3	10.200.180.137	DNS	178	Standard query response 0x804a A www.nyu.edu CN
5	2.292017	10.200.180.137	10.250.200.3	DNS	89	Standard query 0x2042 AAAA d1q5ku5vnwkd2k.cloud
6	2.294366	10.250.200.3	10.200.180.137	DNS	313	Standard query response 0x2042 AAAA d1q5ku5vnwkd2k.cloud

> Frame 3: 71 bytes on wire (568 bits), 71 bytes captured (568 bits) on interface \Device\NPF{...}	0000	44 b6 be 0a 8f 58 14 13
> Ethernet II, Src: AzureWaveTec_c7:3e:39 (14:13:33:c7:3e:39), Dst: Cisco_0a:8f:58 (44:b6:be:0a:8f:58)	0010	00 39 5d 2f 00 00 80 11

> User Datagram Protocol, Src Port: 49664, Dst Port: 53	0030	00 00 00 00 00 00 03 77
Source Port: 49664	0040	64 75 00 00 01 00 01
Destination Port: 53		
Length: 37		
Checksum: 0xc827 [unverified]		
[Checksum Status: Unverified]		
[Stream index: 0]		
> [Timestamps]		
UDP payload (29 bytes)		
> Domain Name System (query)		
Transaction ID: 0x804a		
> Flags: 0x0100 Standard query		
Questions: 1		
Answer RRs: 0		
Authority RRs: 0		
Additional RRs: 0		
> Queries		
[Response In: 4]		

2. The length of each of the UDP header fields is: **2 bytes** (The UDP header has a fixed length of 8 bytes)

Source Port (udp.srcport), 2 bytes
Destination Port (udp.dstport), 2 bytes
Length in octets including this header and the data (udp.length), 2 bytes
Details at: https://www.wireshark.org/docs/wsug_html_chunked/ChAdvChecksums.html (udp.checksum), 2 bytes

3. The value of the length field is: **37**

The length of the entire UDP datagram, including the header and data, is indicated by the Length field of a UDP packet. The length of UDP payload for the selected packet is 29 bytes. 37 bytes - 8 bytes = 29 bytes.

```

User Datagram Protocol, Src Port: 49664, Dst Port: 53
  Source Port: 49664
  Destination Port: 53
  Length: 37
  Checksum: 0xc827 [unverified]
  [Checksum Status: Unverified]
  [Stream index: 0]
  > [Timestamps]
  UDP payload (29 bytes)

```

4. The maximum number of bytes that can be included in a UDP payload will be:

Maximum UDP packet size - UDP header size = $(2^{16} - 1) - 8 = 65527$ bytes

5. The largest possible source port number is $2^{16}-1 = 65535$

6. The protocol number for UDP is **17** in decimal notation which in hexadecimal notation is **0x11**.

Protocol: UDP (17)

```

0000 44 b6 be 0a 8f 58 14 13 33 c7 3e 39 08 00 45 00 D...X..3>9..E.
0010 00 39 5d 2f 00 00 80 11 4b 36 0a c8 b4 89 0a fa .9]/... K6.....
0020 c8 03 c2 00 00 35 00 25 c8 27 80 4a 01 00 00 01 .....5-% '-J....
0030 00 00 00 00 00 00 03 77 77 77 03 6e 79 75 03 65 .....w ww·nyu·e
0040 64 75 00 00 01 00 01 du.....

```

7. The packet number for the 1st UDP segment is: **3**

The packet number for the 2nd UDP segment is: **4**

For the UDP packet sent by the host, the source port is **49664** and the destination port is **53**

For the UDP packet sent as the reply of the first packet, the source port is **53**, and the

destination port is: **49664**

Hence the source and destination ports for the 1st packet become the destination and source ports for the reply packet respectively. Thus, the port works as a source as well as a destination depending on the request or response packet.
